Systems Analyst/Programmer (M6) Cover Letter

Dear Sir /Madam,

I am a 24-year-old single man with a degree in Business Information Technology (BIT) obtained from the University of Greenwich, UK in 2019. As a Bachelor's degree holder with over 3 years of experience in designing, developing, and modifying information systems, I have gained expertise in programming, such as Java and SQL. My knowledge of Object Relational Mapping (ORM) technologies and system integration technologies has helped me deliver effective solutions in my current role.

In my previous role, I conducted user information system needs assessments and proposed information systems to address them. I also researched, evaluated, and recommended systems and appropriate technology to meet users' needs.

I am impressed with MANEB's mission to conduct academic and other examinations in Malawi and award certificates to successful candidates. I believe that my technical and soft skills would make me a valuable addition to your team. I am good at problem-solving and can work well under pressure. I have excellent communication skills, which would be an asset in interacting with users.

I look forward to hearing from you and thank you for your time and consideration.

Sincerely,

Wilson Soza
